Subject: New Precious Metal Plating Capability

I am pleased and excited to announce that AirBorn has acquired a neat little plating company right next door to our Little Falls stamping and forming location.

Goldeneye Solutions has been a long time supplier and strong business partner with AirBorn. More and more of our new connector designs involve stamped and formed products, which makes innovative stamping and gold plating capabilities key to AirBorn's future. Goldeneye is a proven business partner in this arena. We believe coupling their precious metal plating capabilities with Little Falls stamping, molding and automation will keep us very responsive and competitive for the future.

Having our own plating capability will provide AirBorn an excellent competitive advantage:

- It will help our quick turn capability for ADS (Accelerated Delivery Service) and specials.
- It provides a secure alternate plating source.
- It provides key technical talent for future process and product development.
- It will allow us keep our pricing competitive by eliminating some of the middle man mark up.

The addition of Goldeneye to the team provides a powerful package of product offerings and more of a total package of solutions to our customers. AirBorn now offers:

- Mechanical engineering expertise – Interconnect Division
- Electrical engineering expertise – Toronto Flex Circuits and Lake City
- Chemical engineering expertise – Little Falls (Goldeneye) and Toronto
- Tooling and automation expertise – Little Falls
- Plastics expertise – Winnsboro and Little Falls
- Value Added sub-assembly expertise- Lake City and Chatham, UK
- CNC's and Screw Machine expertise – Interconnect Division
- And very soon, our Georgetown facility will be fully equipped with advanced testing capabilities.

Please join me in welcoming the Goldeneye gang to the AirBorn team!
